

3.4.5 整体算法流程

算法 2: Hexa-Sweep 空区域提取、WKD-IBE 完备性密钥生成与 ZK 真实性证明

输入: TPC-H 输入文件, WKD-IBE 参数, Accumulator 参数, 三维查询框 *query*

输出: 输出完备性密钥集合、几何完备性验证结果、真实性证明验证结果与
benchmark timing report

- 1: 设置常量 $NumDims \leftarrow 3$, $BitLength \leftarrow 12$, $MaxKeyPatternDecryptChecks \leftarrow 64$
- 2: 打印 "Starting benchmark"
- 3: 初始化曲线参数
- 4: $(params, masterKey) \leftarrow \text{WKDIBE.SETUP}(36, \text{true})$
- 5: $acc \leftarrow$ 加载 accumulator keys
- 6: 构造三维查询框 *query*:
 $date \in [1994-01-01, 1994-12-31]$
 $discount \in [5, 7]$
 $quantity \in [0, 23]$
- 7: $dbData \leftarrow []$, $dbFr \leftarrow []$, $I \leftarrow []$, $X \leftarrow []$
- 8: $queryUniquePoints \leftarrow \emptyset$

▷ 阶段一: 读取数据库并划分查询内外点

- 9: **for all** TPC-H 文件中的每一行 **do**
- 10: $point \leftarrow$ 从当前行解析得到的三维点
- 11: 将 $point$ 加入 $dbData$
- 12: $pointBits \leftarrow \text{FORMATPOINTTOBINARY}(point)$
- 13: $fr \leftarrow \text{SEEDTOFR}(pointBits)$
- 14: 将 fr 加入 $dbFr$
- 15: **if** $point \in query$ **then**
- 16: 将 fr 加入 I
- 17: 将 $point.Coords$ 加入 $queryUniquePoints$
- 18: **else**
- 19: 将 fr 加入 X
- 20: **end if**
- 21: **end for**

22: $digest_{DB} \leftarrow \text{COMMITFAKEG1}(dbFr)$

23: $digest_X \leftarrow \text{COMMITFAKEG1}(X)$

▷ 阶段二：将三维查询框转换为初始 **wildcard pattern**

24: $initialPrefixes \leftarrow \text{MAPTOIDS}(query)$

25: $initialPatterns \leftarrow []$

26: **for all** $prefix \in initialPrefixes$ **do**

27: $pattern \leftarrow \text{FORMATTOWILDCARDPATTERN}(prefix)$

28: 将 $pattern$ 加入 $initialPatterns$

29: **end for**

▷ 阶段三：Hexa-Sweep 空区域提取

30: $permutations \leftarrow$ 三个维度的全部 6 种排列

31: $combinedEmptyPatterns \leftarrow []$

32: **for all** $permutation \in permutations$ **do**

33: $bitOrder \leftarrow \text{GENERATEBITORDERCUSTOM}(permutation, BitLength)$

34: $patterns \leftarrow \text{SUBTRACTPOINTSORDERED}(initialPatterns, dbData, bitOrder)$

35: 将 $patterns$ 中的所有 $pattern$ 加入 $combinedEmptyPatterns$

36: **end for**

37: $maximalEmptyPatterns \leftarrow \text{SELECTMAXIMALPATTERNS}(combinedEmptyPatterns)$

▷ 阶段四：近似求解最小 **completeness key cover**

38: $(coverCandidates, emptyPointCount) \leftarrow$

$\text{BUILDCOVERCANDIDATES}(maximalEmptyPatterns, query, queryUniquePoints)$

39: $selectedCover \leftarrow \text{GREEDYSETCOVER}(coverCandidates, emptyPointCount)$

40: $selectedCoverPatterns \leftarrow []$

41: **for all** $candidate \in selectedCover$ **do**

42: 将 $candidate.Pattern$ 加入 $selectedCoverPatterns$

43: **end for**

▷ 阶段五：真实 **WKD-IBE completeness key** 生成

44: $rootKey \leftarrow \text{KEYGEN}(params, masterKey, emptyAttrs)$

```

45:  $initialKeys \leftarrow \text{DERIVEINITIALPATTERNKEYS}(params, rootKey, initialPatterns)$ 
46:  $verificationEmptyKeys \leftarrow$ 
     $\text{DERIVEEMPTYPATTERNKEYS}(params, initialKeys, selectedCoverPatterns)$ 
47:  $totalKeyBytes \leftarrow 0$ 
48: for all  $key \in verificationEmptyKeys$  do
49:    $totalKeyBytes \leftarrow totalKeyBytes + |\text{MARSHAL}(key, \text{true})|$ 
50: end for

```

▷ 阶段六：客户端几何完备性验证

```

51:  $totalQueryVolume \leftarrow 0$ 
52: for all  $pattern \in initialPatterns$  do
53:    $totalQueryVolume \leftarrow totalQueryVolume + \text{CALCULATEVOLUME}(pattern)$ 
54: end for
55:  $(coveredEmptyPoints, maxOverlap) \leftarrow \text{VERIFYEMPTYREGIONPATTERNS}(query, selectedCoverPatterns, q)$ 
56:  $sampledKeyChecks \leftarrow \text{VERIFYDERIVEDPATTERNKEYS}(params, verificationEmptyKeys)$ 
57:  $realSpatialVolume \leftarrow |queryUniquePoints|$ 
58: if  $coveredEmptyPoints + realSpatialVolume \neq totalQueryVolume$  then
59:   报错：空区域覆盖与真实点数量不匹配，完备性验证失败
60: end if

```

▷ 阶段七：ZK-Accumulator 真实性证明

```

61:  $I_{poly} \leftarrow \text{POLYTREE}(I)$ 
62:  $C_I \leftarrow$  对  $I_{poly}$  生成 Pedersen commitment
63:  $zkMemProof \leftarrow \text{ZKMEMPROVER}(C_I, digest_X, transcript)$ 
64:  $h_{mem} \leftarrow \text{HASH}(zkMemProof)$ 
65:  $zkDegProof \leftarrow \text{ZKDEGCHECKPROVER}(C_I, I_{poly}, h_{mem})$ 
66:  $ok_1 \leftarrow \text{ZKMEMVERIFIER}(zkMemProof, digest_{DB}, C_I.Com, transcript)$ 
67:  $ok_2 \leftarrow \text{ZKDEGCHECKVERIFIER}(C_I.Com, zkDegProof, h_{mem})$ 
68:  $ok_1 \leftarrow \text{ZKMEMVERIFIER}(zkMemProof, digest_{DB}, C_I.Com, transcript)$ 
69:  $h_{mem} \leftarrow \text{HASH}(zkMemProof)$ 
70:  $ok_2 \leftarrow \text{ZKDEGCHECKVERIFIER}(C_I.Com, zkDegProof, h_{mem})$ 
71: if  $\neg ok_1 \vee \neg ok_2$  then

```

72: 报错: 真实性证明验证失败

73: **end if**

▷ 阶段八: 输出 **benchmark** 结果

74: 打印并记录:

 查询内真实点数量 $|I|$

 查询外点数量 $|X|$

 初始查询块数量 $|initialPatterns|$

 极大空区域块数量 $|maximalEmptyPatterns|$

 最终 completeness key 数量 $|verificationEmptyKeys|$

 completeness key 总字节数 $totalKeyBytes$

 空点覆盖数量 $coveredEmptyPoints$

 最大重叠次数 $maxOverlap$

 抽样密码学验证次数 $sampledKeyChecks$

 ZK membership 验证结果 ok_1

 ZK degree-check 验证结果 ok_2

75: 输出最终 timing report

76: 程序结束
